PROFESSIONAL SUMMARY

Software Engineer with nearly 4 years of combined experience, focused on .NET backend systems for enterprise applications. Experienced in developing APIs and business modules, integrating services, and automating Azure deployments, with additional full-stack development experience.

WORK EXPERIENCE

STC Services | Software Engineer | Sep 2023 - Present | Remote / Dubai, UAE

- Build .NET 8 backend APIs and business modules for an enterprise digital identity platform spanning facility access, attendance, visitor management, work orders, maintenance, and contractor/technician workflows.
- Design backend modules end to end using Clean Architecture, CQRS, MediatR, EF Core, and SQL Server; created reusable packages for logging, file handling, and notifications to reduce duplication and standardize implementation across services.
- Owned the Asset Management backend from requirements and technical design through QA, covering configurable asset data, lifecycle rules, site authorization, device pairing/history, work order integration, and validated Excel import/export.
- Helped evolve monolithic functionality into core, identity, notification, reporting, and workflow microservices, improving deployment isolation and separating reporting load from core services.
- Built a shared StackExchange.Redis library for JWT revocation and session-version validation, enabling Core to check individual-token and user-wide invalidation without per-request calls to Identity Service.
- Configured branch-triggered Azure DevOps pipelines for Azure App Services and IIS-hosted VMs, automating build, artifact publishing, and deployment and replacing manual file-copy releases.
- Built SignalR backend flows for live location tracking and restricted-area alerts; integrated Outlook calendar APIs and a Python/Dlib service, and contributed to UAE Pass and permission-based authorization.

Digital Revamp | Part-time Full Stack Developer | Apr 2023 - Aug 2024 | Remote / Fanar, Lebanon

- Enhanced an internal timesheet, HR, and project tracking platform used by 50 to 100 employees, replacing manual Excel workflows with centralized web records.
- Built vacation tracking, multilevel approvals, timesheet rules linked to projects, payable hours logic, and dashboards/reports for employee, department, client/project, payroll, and billing views.
- Helped migrate a .NET 5 ASP.NET Core MVC/Razor system toward .NET 8 REST APIs and Angular using C#, EF Core, and SQL Server.

CME | Software Engineer Intern | Jun 2023 - Jul 2023 | Beirut, Lebanon

- Built backend authentication, waypoint, and recommendation features for a location/trip-planning internship project using NestJS, React/TypeScript, Firebase, MongoDB, HERE/Yelp APIs, plus Cypress/Jest tests.

EDUCATION

Bachelor of Science in Computer Science | Beirut Arab University | 2023 | GPA: 3.7/4.0 | Honors

Student Representative, Faculty of Science | Senior Project Competition: 1st on campus

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript/TypeScript, Python, Java fundamentals

Backend: .NET 8, ASP.NET Core Web API/MVC, REST APIs, Entity Framework Core, Clean Architecture, CQRS, MediatR, Microservices, Repository Pattern, SignalR

Data & Security: SQL Server, PostgreSQL, MongoDB, Redis/StackExchange.Redis, JWT, Authentication/Authorization, schema design, migrations

Cloud/DevOps: Azure App Services, Azure VMs, Azure DevOps Pipelines/Artifacts, Application Insights, IIS, CI/CD, Docker, Kubernetes, Linux, Git, Azure Repos/GitHub

Frontend/Testing: Angular, React, HTML/CSS, Bootstrap, Unit Testing, API Testing, Cypress, Jest

LANGUAGES

Arabic: Native | English: Highly Proficient | French: Highly Proficient | German: A2
